Just Warrp It!

Empowering the growth and development of the NFT space

TOASTPUNK FOR TOMORROW'S MINDS

Welcome to **ToastPunk Genesis**, the next evolution in the ever expanding ToastPunk universe. This project is [verified on Twitter](#) with a fully doxxed team similar to other known blue chip NFT projects such as Bored Ape Yacht Club, Cool Cats and Doodles.

ToastPunk Genesis is a **collectible NFT series** based on real life moments with a rarity scale for short to medium term gains and an ongoing utility benefit as early settlers into ToastPunk World, a 3D & AR virtual world to earn **TOA\$T passive income** in a life and building simulation P2E game.

SUMMARY

- Generative Rarities
- Utility Benefits
- Community Values
- Minting Process
- Collections Overview
- Roadmap 2022

GENERATIVE RARITIES

Just like the very first generative digital art collection, **Crypto Punks** by Larva Labs, that sells for millions of dollars 4 years after creation, the **ToastPunk Genesis** collection was created using the same coding methods.

However, Warrp has introduced a new standard known as **scrambled trait art** where the collections' main 10 baseline characters are re-scrambled with traits from one set of its baseline to another forming indistinguishable characters from its former set of popular and well known characters.

UTILITY BENEFITS

The primary use case for holders is to form the **early settlers population** of **ToastPunk World** with perks such as TOA\$T token drops and early game access to start earning passive income.

The **short and medium term benefits** offers growth in value through a rarity scale for the different characters and traits. A special **"Upgradeable"** trait provides holders with a secondary airdrop of a new NFT that is able to be used for unlocking perks with the original (OG) ToastPunk collection.

COMMUNITY VALUES

ToastPunk Genesis is determined to become a household name in the Web 3 space for years to come. In support of this, the Genesis community will be hosted by the **ToastPunk World discord server** as a gateway for the NFT community.

MINTING PROCESS

There are two methods that minters can use to mint a ToastPunk Genesis NFT. The first is via the publically accessible dapp website and the second is directly from the smart contract.

Minting via Website: Connect Wallet > Choose Quantity > Send Transaction

Minting via Smart Contract: View this [How to mint from contract guide](#)

Smart Contract minting is useful if you know how to interact with coding. The cost to mint will be 0.069 Ether (for 3) plus gas. Minters can mint up to 20 NFTs per address. NFTs minted will directly be visible in OpenSea and minters are reminded to join the [ToastPunk World discord](#) for community updates.

GAS SAVINGS CONTRACT

ToastPunk's ERC-721 contract is gas optimised by over 60%

COLLECTIONS OVERVIEW

There are 4 smart contracts used to formulate the ToastPunk series.

- Collection 1: OG (1,000)
- Collection 2: Genesis (10,000)
- Collection 3: Upgradeable Pass (1,000)
- Collection 4: OG Upgraded (1,000)

Each has its own unique perks, rarities and benefits.

- Q1: Complete minting for all 4 collections
- Q2: Launch TOA\$T ICO token
- Q3: Early Settler ToastPunk World demo
- Q4: ToastPunk World public launch
